Case Study

Overview

The 10th International Symposium on Environmental Hydraulics (ISEH) held in Aberdeen, Scotland on the 25th – 27th June 2024. Organised by the University of Aberdeen and the IAHR Technical Committee on Fluid Mechanics of IAHR, the 10th ISEH, built on the success of previous ISEH symposia in bringing together international experts to present and discuss new research, technical innovations and case studies relating to the symposium’s theme “environmental hydraulics for a sustainable and resilient future”.

The Fluid Mechanics Research Group at the University of Aberdeen are proud to have hosted this event, bringing the symposium to the UK for the first time in its history, and to Europe for the first time since the 6th ISEH held in Athens in 2010. It was held within the University’s historic Old Aberdeen campus, providing an ideal setting in which to share knowledge and to meet old and new friends.

We have a proud history of environmental hydraulics research at the University of Aberdeen and so we are absolutely delighted to have successfully hosted the Symposium here this year- the first time the symposium has been to the UK. It has been a very exciting meeting: we have welcomed more than than 150 engineers and scientists from around the world, including some of the world’s most distinguished researchers, addressing scientific issues relating to water flows in the natural and built environments, with a particular focus on nature-based solutions to challenging problems in rivers, estuaries and coasts.
