# *Interested in participating in a visual perception experiment?*

We are looking for participants to take part in an experiment on object representation in the School of Psychology. We need participants to look at images on the computer screen and classify them.

The images will be delineated in different combinations of colour and luminance. This will allow us to examine how different visual pathways contribute to our everyday vision. The experiment offers a chance to experience something new and learn a little bit about ways in which our brain processes complex visual information such as objects. The experiment takes place in the William Guild Building and lasts 2 hours, which includes a half hour break. We will compensate you 10 pounds for your time.

If you are interested in volunteering and aged between 18-40 years, please contact Sammy Student at: sammy.*student.10@abdn.ac.uk* more information.

This study has been approved by the Psychology Ethics Committee.
